Lean Distribution: Optimizing Logistics & Supply Chain Ops

Ref: 20230711_124030 Location: Bordeaux (France) Fees: 5200 GBP

Course Description

This 1-week course provides a comprehensive understanding of lean principles and their application in distribution, logistics, and supply chain operations. Participants will learn to identify and eliminate waste, optimize processes, and improve overall efficiency in their operations. The course combines theoretical knowledge with practical exercises to ensure participants can immediately apply lean concepts in their workplace.

Learning Objectives

- Understand the core principles of lean and their relevance to distribution and logistics
- Identify and eliminate various forms of waste in supply chain operations
- Apply lean tools and techniques to optimize warehouse and distribution processes
- Develop strategies for implementing lean practices across the supply chain
- Learn to measure and continuously improve lean initiatives
- Create a culture of continuous improvement within the organization
